

■ StellarLend — Demo Video Presentation Script

Target Duration: 90 Seconds | Stellar Soroban Smart Contracts & DeFi Protocol

[0:00 – 0:15] ■ Introduction & Landing Page

SCREEN ACTION:	Open https://stellarlend.vercel.app/ and scroll through the landing page hero section.
VOICEOVER:	"Hello everyone! Welcome to StellarLend, a decentralized, non-custodial lending and borrowing protocol built on Stellar's Soroban smart contract platform. StellarLend enables cross-asset collateralized loans with dynamic interest rates, real-time price feeds, an automated liquidation engine, and decentralized DAO governance."

[0:15 – 0:30] ■ Wallet Connection & Protocol Dashboard

SCREEN ACTION:	Click 'Launch App', navigate to /dashboard, and connect Freightier Wallet (or Testnet demo wallet).
VOICEOVER:	"Let's launch the app and connect our Freightier wallet on Stellar Testnet. Once connected, the Dashboard gives users a bird's-eye view of protocol stats: Total Value Locked, Current Borrow APY, Net Earned Interest, and their personal Health Factor, ensuring their loan remains safe from liquidation."

[0:30 – 0:50] ■ Lending & Borrowing Flow

SCREEN ACTION:	1. Go to /lend -> Enter 500 XLM/USDC -> Click Deposit. 2. Go to /borrow -> Show dynamic rate curve -> Enter 150 USDC -> Click Borrow.
VOICEOVER:	"On the Lend page, liquidity providers deposit assets to earn passive yield. Transfers are handled securely by our SEP-41 compliant token contract. Next, on the Borrow page, borrowers take out loans against their deposited collateral. Our protocol utilizes a kinked interest rate curve that dynamically adjusts borrow rates based on pool utilization."

[0:50 – 1:10] ■ Liquidation Engine & Price Oracle

SCREEN ACTION:	Go to /liquidate -> Interact with the Health Factor slider (< 1.0) and highlight the 5% liquidator bonus.
VOICEOVER:	"Security is paramount. StellarLend integrates an on-chain Price Oracle contract that continually monitors collateral valuation. If a borrower's Health Factor drops below 1.0, the Liquidation Engine allows liquidators to repay the debt and claim the collateral with an instant 5% liquidator incentive bonus."

[1:10 – 1:25] ■ DAO Governance & Staking

SCREEN ACTION:	Go to /governance -> Show active proposals and click 'Vote For'.
VOICEOVER:	"Community members participate in protocol decisions through our Governance DAO contract, creating proposals and casting token-weighted votes on collateral factors and reserve parameters."

[1:25 – 1:40] ■ CI/CD Pipeline & 25 Automated Tests

SCREEN ACTION:	Switch tab to GitHub Actions showing 3/3 Green Checks (Contract Tests, Frontend Tests, Security Audit).
VOICEOVER:	"Under the hood, StellarLend is backed by production-grade CI/CD pipelines on GitHub Actions with 25 automated unit and integration tests, WASM contract builds, and automated security audits with cargo-audit. Thank you for watching the StellarLend demo!"

■ Quick Recording & Submission Tips:

- **Screen Recording Tool:** Use Loom (loom.com browser extension) or OBS Studio — 1080p full screen.
- **Pacing:** Speak clearly and give each page 3–5 seconds on screen as you mention it.
- **Link for Submission:** Upload to YouTube (Unlisted), Google Drive (Public view link), or Loom URL.
